Control Lice to Protect Your Herd

By: Dr. Doug Ross, Senior Technical Service Entomologist, Bayer Animal Health

Lice infestations have the potential to be costly and frustrating. Left uncontrolled, lice can cause anemia, lower milk production, decreased feed efficiency and reduced weight gain. With proper planning and resources, producers can limit the destruction caused by lice this fall and winter.

Life Cycle and Types of Lice

Two types of lice live on cattle: sucking lice and biting lice. One species of biting lice and three species of sucking lice infest cattle in the United States.

- Sucking lice feed on the host's blood and are most often found along the top line of an animal's back, but also can spread to the poll and tail head.
- Biting lice, which ingest skin, hair and scabs, are more widespread on the body.

Louse life cycles are generally three to four weeks in length and spent entirely on animals. This begins with female lice laying eggs (nits), which are glued to the host's hair. Nymphs hatch from the eggs one to two weeks later and become fully developed adults in about two weeks. Adult females can lay approximately 30 to 40 eggs during their life. If not controlled, a single adult female in September can result in approximately 1 million lice by January.

Lice Prevention and Control

There are a variety of insecticides that can help you effectively control lice. Dusts, pour-ons and sprays provide easy-to-use and versatile treatment options.

Action also must be taken to prevent re-infestation. Lice spread primarily through animal to animal contact, including feeding, breeding or shipping. Due to this threat, facilities used by infested cattle should either be treated with insecticide or should remain empty for 10 days before being used by clean stock. Additionally, any new animals should be isolated without nose-to-nose contact through the fence.

Keeping Safety in Mind

Be sure to read the label and know what personal protection equipment is required for the products being used for lice control. Also, be sure the employees applying these products are trained as well.

Seasonal Spotlight: Calf Jacket Booking Program

BUY 5 CALF JACKETS, GET 1 FREE!

For every 5 calf jackets you purchase, receive an additional jacket free.

Example: Buy 5 + 1 Free = 6 jackets, Buy 20 + 4 Free = 24 jackets

All in-stock jackets are eligible. Items must be of like kind.

Offer valid until 12/31/16.

Calf-Tel

Made with 200 grams of 3M Thinsulate™ material, this calf jacket is breathable due to its small fibers. Material keeps calves insulated from the cold while keeping moisture away from the skin.

#14680 - Large - Pink

Economy

Provides superior thermal capabilities and stands up to the rigors of washing machine agitation cycles.

#13454 - Small, Jersey

#13455 - Reg, Holstein

#13456 - Extra Large, Holstein

E & R Calf Blanket

Helps calves stay warm and dry with a durable water-resistant outer shell and quilted interior. The Velcro front closure and leg straps with quick-release buckle easily adjust.

#18454 - Small, 19" x 22" - Brown

#18455 - Medium, 21" x 27" - Green

#18456 - Large, 26" x 29" - Blue

#18457 - Extra Large, 32" x 35" - Black

Fly Away by Flyaway

Provide a barrier against wet bedding, drafts and cold air. Tough outer shell is constructed of water-resistant nylon and insulated with Thinsulate™.

Adjustable leg straps and front closure provides a snug comfortable fit for growing calves. 2-year warranty.

#10514 - Holstein

Gro-Well by Flyaway

Tough outer shell is constructed of insulated, water-resistant nylon.

The jacket features a reinforced outer edge, and is quilted inside and outside. The leg straps and front closure adjust to fit growing calves.

#15499 - Small

#15497 - Large

UdderTech

Thinsulate™ lining in two levels of insulation: single insulation R value 1.67 or double insulation R value 3.34. Quick release buckles on straps mean there is no Velcro to get matted or dirty. Extra strap length accommodates growth, while the extra belly strap keeps the blanket snug when lying down. Constructed of durable, water-resistant, nylon. Machine wash and dry.

#14758 - Small, Single Insulate - Red

#14759 - Small, Double Insulate - Red

#14756 - Reg, Single Insulate - Blue

#15169 - Reg, Double Insulate - Blue

Excede

- Labeled to treat acute postpartum metritis with 2 doses, administered 72 hours apart with the route of administration at the base of opposite ears
- Labeled to treat BRD and foot rot with one dose with the route of administration at the base of ear
- Approved dosage is 1.5 mL/100 lbs.
- Meat withdrawal is 13 days, while milk discard is 0 days when used according to label

SmartCare

- A natural nutritional health product for pre-weaning milk and milk replacer calf diets
- A two-step milk and start based solution that supports:
 - Better calf immunity and overall health
 - Faster rumen and intestinal development
 - Increased starter intake
 - Better feed efficiency
 - Greater body weight gain

NEW Products

Polymast™

- 62.5 mg of ampicillin activity provides effective treatment of mastitis in lactating cows
- Convenient once-per-day dosing
- Potent bactericidal action that does not rely on the cow's immune system to kill bacteria
- **Directions:** Infuse one syringe (10 mL) into each infected quarter. Repeat at 24-hour intervals until a maximum of three treatments have been given. Hold milk 72 hours after the last treatment, meat withhold 10 days.

NEW SIZE & CONTAINER EfferCept SG™

- Now available in a 20-count container or an easy-to-use gallon mixing container
- Proven to kill a broad spectrum of mastitis-causing organisms in 15 seconds
- Tablets dissolve in hard or soft potable water on farm and remains stable for 7-10 days
- Aloe-enriched

Bovilis Coronavirus™

- Aids in the reduction of enteric disease caused by Bovine Coronavirus
- Safe for use in colostrum-fed calves
- Approved for intranasal application in one or both nostrils
- Safe for use in calves as young as 3 days of age
- Available in 25 x 1 and 50 dose

Immu-PRIME™

- Contains proprietary blend of proteins and nutrients
- Derived from maternal colostrum that is screened to ensure it comes from healthy herds
- Contains bacteriostatic small proteins, such as Lactoferrin and Oligosaccharides
- Available in 10 mL tube and 250 mL (10 dose) bottle

Nursemate 50 Colostrum Supplement w/ Immu-PRIME™

- High performance colostrum supplement that begins protecting a newborn calf naturally
- Contains 50 gm of immunoglobulins and a mixture of essential proteins, lipids, vitamins and carbohydrates necessary for a healthy start
- Easy-to-mix powder

Nursemate PLUS 150 Colostrum Replacer w/ Immu-PRIME™

- Contains 150 gm of globulin protein and is a single-dose replacement for maternal colostrum
- Activates cells of the newborn calf for protection from disease
- High performance powder improves the colostrum absorption and maternal programming of the calf

Bottle Brush Drill Attachment

- Made with a mixture of soft, non-strath bristles that reach every corner of 2, 3 and 4-quart bottles
- Attaches to a rechargeable cordless power drill

KISSavings - We Work for Your Reward!

Keep It Simple Savings

- We **save** you **time** and **money** by managing manufacturer promotions & rebate programs for you!
- We track and monitor your purchases to **optimize** program **savings** for your profitability.
- We **simplify** programs through our direct links to manufacturers, processing your rebates for you.
- Automatic reporting ensures you **earn credit** for all of your qualifying program purchases from ANIMART.
- We **Keep It Simple**, Saving **YOU** Time and Money!

Nursebate/Immu-PRIME Special

Purchase 2 pouches of Nursebate 50 or Nursebate PLUS 150, receive 1 FREE tube of Immu-PRIME 10 mL

Purchase must be of like-kind.
Offer valid 11/1/16 - 11/30/16

- Available in 300 or 600 gm pouches
- Nursebate PLUS 150 contains 150 gm of globulin protein and is a single-dose replacement for maternal colostrum
- Nursebate 50 is a high performance colostrum supplement that begins protecting a newborn calf naturally

Imrestor Introductory Offer

Producers who make a 6-month commitment protecting more than half their herd with Imrestor will earn the following REBATE:

- Greater than or equal to 50% herd use = \$2 per dose rebate
- 100% herd use = \$4 per dose rebate

Commitment must be made by 12/31/16

- This product requires a valid prescription from a veterinarian
- Approved for the reduction of the incidence of clinical mastitis in the first 30 days of lactation in dairy cows and replacement dairy heifers
